EKAROS

Experimentation for every team that ships fast.

LLM-native experimentation platform

Pre-Seed | B2B SaaS | February 2026

THE PROBLEM

Teams that need experimentation the most never use it.

Too Much Effort

Setup costs are too high for small, fast-moving teams. Experimentation never becomes a priority.

Enterprise-Only Tools

Optimizely & LaunchDarkly are built for large teams with dedicated resources. Small teams are shut out.

Speed Without Direction

AI coding tools help teams build 10x faster, but provide zero guidance on what to build.

THE SOLUTION

Experimentation as easy as a conversation.

Ekaros integrates with any LLM via MCP (Model Context Protocol) so developers can set up A/B tests, feature experiments, and vendor comparisons through natural language. No new dashboards. No context-switching.

01

Describe

Developer describes an experiment to their LLM

02

Configure

LLM uses Ekaros MCP to register & generate code

03

Track

Ekaros tracks events across frontend & backend

04

Analyze

Ask the LLM for results in natural language

WHY NOW

The gap between building speed and product understanding has never been wider.

AI Makes Building 10x Faster

Cursor, Copilot, and AI coding assistants have dramatically accelerated development speed. Teams ship features in days instead of weeks. But faster building without validation means more wasted effort, not less.

MCP Creates the Interface

Model Context Protocol (MCP) is creating a standardized way for tools to plug into LLMs. For the first time, an integration-first experimentation tool that lives inside the developer's LLM is technically viable at scale.

MARKET OPPORTUNITY

$9.0B+

TAM

A/B testing & experimentation software market

$1.2B

SAM

Addressable at 10% market penetration

$200M+

SOM

Target ARR by Year 5

12–18% CAGR

OUR TRUE OPPORTUNITY: Expanding the market by bringing experimentation to teams that have never used it. Every org building software that needs customer validation is a POTENTIAL CUSTOMER!!

COMPETITIVE LANDSCAPE

	Optimizely	LaunchDarkly	Ekaros
Primary Focus	Digital Experience	Feature Flags	Experimentation Only
Target Customer	Enterprise	DevOps / Enterprise	Startups & Small Teams
Setup Effort	High	Medium	Conversational
Interface	Dashboard	Dashboard + API	LLM-Native (MCP)
Pricing	Enterprise pricing	Per-seat + usage	Startup-friendly SaaS

We're not competing for enterprise budgets.

We're creating a new category of customers - Teams that ship fast but have never experimented.

PRODUCT & PROGRESS

Built

- Onboarding flows for new users
- Project & experiment creation UI
- Analytics dashboards (event counts, box plots)
- Frontend + backend event tracking
- Published ReactJS SDK (npm)
- Published Python SDK (PyPI)
- Working prototype of core use case

Next:

- Cloud deployment
- MCP server + LLM documentation

Tech Stack:

Backend: Golang, Kafka, Redis, Docker

Data: ClickHouseDB + PostgreSQL

Frontend: ReactJS, NodeJS

SDKs: Python (PyPI), React (npm)

APIs: REST + Webhooks

BUSINESS MODEL

Revenue Model

SaaS subscriptions starting with startups and small teams. Enterprise tier with local deployments and custom pricing as we scale.

Go-to-Market

Target accelerator cohorts as initial customers. LLM-native interface as viral distribution — experimentation becomes part of the AI-assisted dev workflow.

Growth Path

Phase 1

Startups

Accelerator founders, solo devs, AI-native teams

Phase 2

Scale-ups

Growing product teams (10-50 engineers)

Phase 3

Enterprise

Local deployments, custom pricing, compliance

THE ASK

We're looking for partners who believe experimentation should be accessible to every team.

Pre-Seed Funding

To go full-time, deploy to cloud and acquire first 100 paying customers

Support

Mentorship, network, and access to our ideal first customers - other startup founders

Market Access

Introductions to early-stage teams, AI-native companies, and developer communities

EKAROS

Let's make experimentation the default, not the exception.
