Project guide: Jyothi S. Nayak (Associate Professor, Department of Computer Science & Engg.)

INTRODUCTION

The main objective of this project is to enhance the capabilities of appliances that are used in daily life with the power of Internet of Things. For this project, work has been focused on improving an induction stove by providing functionalities enabled through Internet of Things technologies and cloud based data systems. This project deals with the untapped smart electric market in the country work with induction stoves instead of the more common gas stove because gas stoves are slowly becoming obsolete.

AIM

To improve safety and provide ease of use using IoT. The large scale aim of the project is to take Home Automation to the next level.

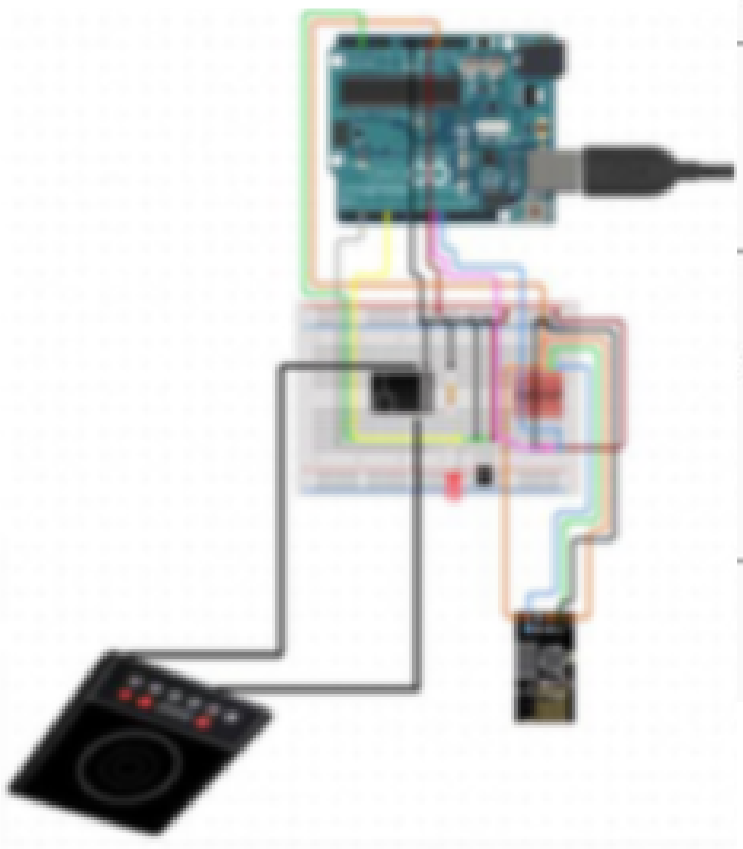

SOFTWARE

Android Studio
- for App Development

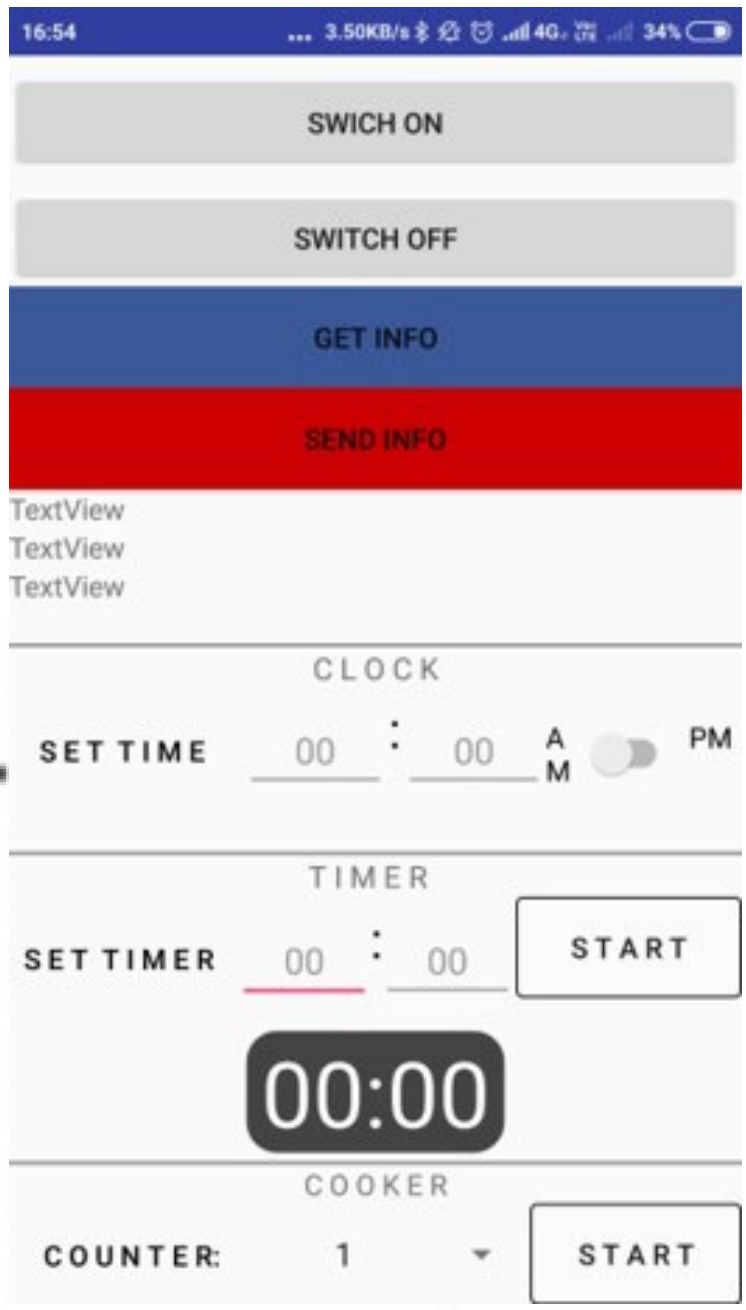

Arduino IDE
- for Programming Arduino Board

ThingSpeak Cloud Service
- for storing data online

CONCLUSION

A smart version of the induction stove was developed. And a step was taken closer to home automation. A low cost model which can be scaled easily and sold commercially at a very competitive sale was successfully developed.
